

IDEATION PHASE

Brainstorm & Idea Prioritization

Team ID	SWTID-2026-5454
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team identified an IT procurement process problem in ServiceNow: Standard Laptop requests require configuration after approval, but manual task creation and assignment can cause delays, oversight, and additional effort for the IT procurement and Hardware teams.

Selected Problem Statement: Standard Laptop procurement requires a streamlined and automated process so that, after the request is approved, a configuration task is created automatically and assigned to the Hardware team. This reduces manual intervention, avoids missed configuration tasks, and helps minimize user waiting time.

Step-2: Brainstorm, Idea Listing and Grouping

The team brainstormed possible solutions for reducing manual effort and improving the Standard Laptop procurement workflow. The ideas were grouped according to the part of the process they improve.

Idea Group	Brainstormed Idea
Request Management	Use the ServiceNow Service Catalog to provide a Standard Laptop item for placing the laptop request.
Approval Management	Use the ServiceNow approval process so that automation proceeds only after the request is approved.
Task Automation	Use Flow Designer to automatically create a Catalog Task after the Standard Laptop request is approved.
Task Assignment	Automatically set the Catalog Task Assignment Group to Hardware so the responsible team receives the task.
Task Information	Automatically populate the Short Description and Description with "Laptop need to Configured".
Catalog Integration	Associate the "Standard Laptop Task" Flow with the Standard Laptop Service Catalog item through Process Engine.
Verification	Verify the Requested Item and Catalog Task records to confirm the task, short description, and Hardware assignment.
Testing	Test the complete workflow from Standard Laptop request through approval and automatic Catalog Task creation.

Step-3: Idea Prioritization

The ideas were prioritized according to their direct relevance to the identified procurement problem, their contribution to automation, and their ability to reduce manual intervention in the Standard Laptop workflow.

Priority	Selected Solution	Reason for Selection
1	Flow Designer – Automatic Catalog Task Creation	Directly addresses the main problem by creating the required configuration task automatically after approval.

2	Automatic Assignment to Hardware	Ensures the generated task reaches the responsible Hardware team without manual assignment.
3	Service Catalog + Approval Process	Provides a controlled entry point for Standard Laptop requests and ensures automation follows the required approval.
4	Automatic Task Description	Provides consistent task information so the Hardware team clearly understands the required laptop configuration.
5	Flow Assignment to Standard Laptop Catalog Item	Connects the automation to the intended catalog item so the Standard Laptop process uses the configured Flow.
6	End-to-End Testing and Verification	Confirms that the request, approval, Flow execution, Catalog Task creation, and Hardware assignment work correctly.

Final selected approach: Implement the Standard Laptop procurement workflow using ServiceNow Service Catalog, the approval process, and Flow Designer. After approval, the Flow automatically creates a Catalog Task, sets the required task description, and assigns the task to the Hardware group for laptop configuration.

Standard Laptop Request → Approval → Flow Designer → Catalog Task → Hardware Assignment → Configuration
