

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Project Design Phase-II – Completed Artifacts

Field	Value
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Primary Platform	ServiceNow
Automation	Flow Designer
Primary Service	Standard Laptop
Primary Assignment Group	Hardware
Approval State	Approved

1. Project Overview

The current IT procurement process for standard laptops involves manual configuration and task handling, which can cause delays, oversight, and additional manual effort. The proposed solution uses ServiceNow Flow Designer to automatically create a Catalog Task after the Standard Laptop request is approved, populate the task details, and assign it to the Hardware group.

7. Application Characteristics

Characteristic	Description	Technology / Implementation
Open-Source Frameworks	No open-source framework is identified in the supplied project.	Not specified
Security	Use platform access controls for request, approval and task data.	ServiceNow roles / ACL-based access controls
Scalable Architecture	Flow-based automation can process repeated Standard Laptop	ServiceNow Flow Designer

	requests without manual task creation.	
Availability	Workflow availability depends on the ServiceNow platform.	ServiceNow platform
Performance	Automation reduces manual handoffs and creates the hardware task after approval.	Flow Designer automation
