

PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Date: 28 September 2026

Team ID	SWTID-2026-5454
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

1. Functional Requirements

Following are the functional requirements of the proposed solution. They are derived from the implemented Standard Laptop Service Catalog and Flow Designer workflow.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Standard Laptop Request	User can access the Service Catalog, select Standard Laptop, and place the laptop request.
FR-2	Request Approval	The Standard Laptop request can be reviewed and approved before the automated task is created.
FR-3	Automated Catalog Task Creation	After approval, Flow Designer automatically creates a Catalog Task for the Requested Item.
FR-4	Task Configuration and Assignment	The created Catalog Task is updated with the short description “Laptop need to Configured”, the Description field, and Assignment Group = Hardware.
FR-5	Flow Assignment to Catalog Item	The “Standard Laptop Task” Flow is assigned to the Standard Laptop Service Catalog item through Maintain Items / Process Engine.
FR-6	Task Status Verification	The user/IT team can open the Requested Item and Catalog Task to verify the generated task, short description, and assigned group.

2. Non-functional Requirements

Following are the non-functional requirements of the proposed solution. These describe the expected quality characteristics of the automated workflow.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Standard Laptop request and approval process should be simple to use, with clear Service Catalog and request/task information.
NFR-2	Security	Only authorized users should submit, approve, or manage requests and catalog tasks according to ServiceNow access controls.
NFR-3	Reliability	The workflow should consistently create the required Catalog Task after an approved Standard Laptop request.
NFR-4	Performance	Automation should create and assign the Catalog Task without unnecessary manual processing or avoidable delay.
NFR-5	Availability	The Service Catalog and Flow Designer workflow should be available when users need

		to submit and process Standard Laptop requests.
NFR-6	Maintainability	The Flow should be clearly configured and associated with the Standard Laptop catalog item so that the automation can be maintained by the IT team.

3. Requirement-to-Workflow Traceability

Project Step	Requirement Covered	Expected Result
Standard Laptop selected in Service Catalog	FR-1	Laptop request is submitted.
Request reviewed by approver	FR-2	Request is approved.
Flow Designer runs after approval	FR-3	Catalog Task is automatically created.
Catalog Task fields are populated	FR-4	Short description and Hardware assignment are present.
Flow connected to Standard Laptop item	FR-5	Automation is applied to the intended catalog item.
Requested Item / Catalog Task opened	FR-6	Task status and configuration can be verified.

Conclusion: The solution requirements define an automated ServiceNow workflow for Standard Laptop procurement. The functional requirements cover request submission, approval, Flow Designer automation, Catalog Task creation, Hardware assignment, and verification. The non-functional requirements address usability, security, reliability, performance, availability, and maintainability of the solution.
