

Project Design Phase

Proposed Solution

Date	28 September 2026
Team ID	SWTID-2026-5454
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	IT procurement of Standard Laptop orders requires configuration after approval. Manual creation and assignment of configuration tasks can cause delays, missed actions, and unnecessary manual effort. The project aims to streamline this process through automation.
2	Idea / Solution description	Implement a ServiceNow workflow using Service Catalog, approval processing, and Flow Designer. After a Standard Laptop request is approved, the Flow automatically creates a Catalog Task, sets the task description to "Laptop need to Configured," and assigns the task to the Hardware group for configuration.
3	Novelty / Uniqueness	The solution connects the Standard Laptop catalog item with Flow Designer so that an approved request automatically triggers the required configuration task and Hardware assignment. This reduces the need for manual task creation and routing within the procurement process.
4	Social Impact / Customer Satisfaction	The solution reduces waiting caused by manual task handling, provides timely routing of configuration work, reduces manual errors and intervention, and improves the user experience for employees and the IT procurement team.
5	Business Model (Revenue Model)	This is an internal IT process-automation solution rather than a direct revenue-generating product. Its business value comes from reducing manual effort, improving process efficiency, supporting faster laptop configuration, and better utilization of IT resources.
6	Scalability of the Solution	The ServiceNow Flow Designer approach can be extended to other standard IT procurement catalog items and related fulfillment tasks. Similar automated flows can be configured for additional hardware or service requests while keeping the same request, approval, task creation, and assignment pattern.
